BRONITKI, A., BARBU, Cornelia, POPESCU, Ana, MOISA, I., MALIAN, A., BADESCU, Doina, and STEFANOV, I., of the Institute of Inframicrobiology (Institutul de Inframicrobiologie) of the Academy of the Socialist Republic of Rumania (al Academiei Republicii Socialiste Romania).

"Laboratory Investigations of the Influenza Epidemic of January-February 1966 in Bucharest."

Buchares, Studii si Cercetari de Inframicrobiologie, Vol 17, No 5, 66, pp 365-370.

Abstract: During the epidemic, the authors isolated 14 strains of type B influenza viruses. In an analysis of 200 human sera during the pre-epidemic period an approximately equal percentage of anti-A₂ and anti-B antibodies was found, while during the epidemic there was a percentage decline of positive A₂ reactions and a marked increase in the percentage of anti-B₂ antibodies. Includes 2 tables and 5 references, of which 3 Rumanian and 2 English-language. -- Manuscript submitted 4 June 1966.

"An Enzoooty of Pseudomonosis in Wild Boars."

Bucharest, Revista de Zootehnie si Medicina Veterinara, Vol 13, No 6, Jun 63, pp 86-90.

Abstract [Authors' English summary modified]: Describes an enzoooty in wild boars during February-March 1963 for which the pyocyanic bacillus was identified as the causative agent. Unlike the reports in the literature, the germ constantly fermented lactose, saccharose and glucose. The stock isolated from the wild boars was very pathogenic, invariably killing a mouse in 16 to 22 hours after intraperitoneal administration of 0.005 ml of a 24-hour broth culture. Contains 4 figures and 4 references, of which 1 French and 3 Rumanian.

Abstract: The Meadows and Pasturage section of the Rumanian Scientific Research Institute of Agriculture conducted a study in 1949 of sorgo in order to select the most suitable varieties for use as fodder. The lines of local selection and varieties were investigated, which had been introduced from the USSR and Italy. The locally selected varieties were more productive than the imported ones and yielded an average harvest of green stuff totalling up to 235.4 centners per ha. -- B. K. Flerov

Anticholinesterase effect of some compounds. Lucia
Purteni, Maria Corneanu, and Constanta Popescu. *Comun.
Acad. Rep. Populare Române* 4, 161-5 (1954). The follow-
ing substances were studied: strychnine, atropine, perritins,
barbital, chloral hydrate, luminal, hyoscyamine, scopol-
amine, neocantergan, parpanit, paludrine, plasmochin, chloro-
quine, eumom (antihistaminics) and acetylcholinics 3016
and 3277, papaverine, diuretin, codeine, cotarnine, narceine,
heroin, β -ionone, vitamin PP, ascorbic acid, and $MgSO_4$.
The activity of cholinesterase (I) was measured by biol. and
nauonometric methods. For strychnine and atropine there
were found doses of activation and inhibition. Ascorbic
acid and $MgSO_4$ have an activating effect on I. It was con-
cluded that the study *in vitro* did not explain the mechanism
of enzymes *in vivo*. A. Halasz

TITLE: Ways of increasing the durability of the refractory coat of steel works ladles

SOURCE: Metalurgia, no. 3, 1965, 144-145

TOPIC TAGS: refractory product, refractory coating

ABSTRACT: A report on the successful use of semi-dry shaping to increase the durability of the coating of ladles, thus reducing the consumption of refractory materials. On the basis of wear studies, the coating was applied in three different thicknesses in different parts, leading to a uniform wear and an increase in durability from 6.63 to 10.7 castings per coating. Title : Remissions in Cancer

Orig Pub : Viata med., 1957, Vol. 4, No. 7, 59-69

Abstract : On the basis of studies of the literature and their own clinical observations, the authors suggest the possibility of remissions in cancer. Emphasis is given to the important theoretical and practical significance of a study of spontaneous remissions in this disease.

6768. PRIMARY TUMOURS OF THE LIVER AND MODALITIES OF RESECTION -
Tumeurs primitives du foie et modalités de résection - Popesco C. Serv.
Chir., Hôp. 'Ilie Pîntilie', Bucarest - PRESSE MED. 1959, 67/5 (186-189)
Illus. 10

Report on 13 cases of primary tumour of the liver which have been treated by partial hepatectomy. Such tumours include neoplasms of the gallbladder and those forms of hydatid cyst which are suitable by their special characters for the same surgical technique as the properly called primary neoplasms. The author analyses the conditions of performance and emphasizes particularly the advantages of those resections called 'atypical' which must take into account the configuration of the intrahepatic biliary-vascular trunks. Under this condition and with improvement of the technique in haemostasis, the 'atypical resections' can be considered as a useful method capable of wider application. The weight of the excised pieces, in the cases reported, was between 250 g. and 2,000 g. Of the 13 patients operated on, 2 who had presented malignant adenomas of the right lobe have succumbed subsequently to hepatic insufficiency due to neoplastic involvement of the remaining left lobe. Another patient with a massive neoplasm of the gallbladder died 4 months after the surgical operation as a consequence of development of the neoplasm into the remaining parenchyma. In one case of polycystic liver associated with cirrhosis, there was development of a cirrhotic process after a lapse of 6 months. The remaining 9 patients, operated on and followed up for a 1- to 4-year interval, are doing well.
